EPICS

This screenshot shows the Jira interface for an epic titled "Baggage Claim Submission & Tracking". The page is divided into several sections: Description, Attachments, Child work items, Linked work items, and Activity. The "Child work items" section is expanded, showing a table of tasks. The right sidebar contains details about the epic, including assignee, reporter, labels, due date, start date, priority, and development fields. The activity section at the bottom shows a comment input field.

Baggage Claim Submission & Tracking

Description
Enable passengers to submit lost-baggage claims and track their claim status and baggage scan timeline.

Attachments

This screenshot shows the Jira interface for an epic titled "Baggage Recovery". The page is divided into several sections: Description, Attachments, Child work items, Linked work items, and Activity. The "Child work items" section is expanded, showing a table of tasks. The right sidebar contains details about the epic, including assignee, reporter, labels, due date, start date, priority, and development fields. The activity section at the bottom shows a comment input field.

Baggage Recovery

Description
Enable the system to recover and track lost baggage by cross-referencing baggage scan logs, updating claim status, and generating recovery alerts.

Complete ALGC Sprint 1

This sprint contains 6 completed work items. That's all of them - well done!

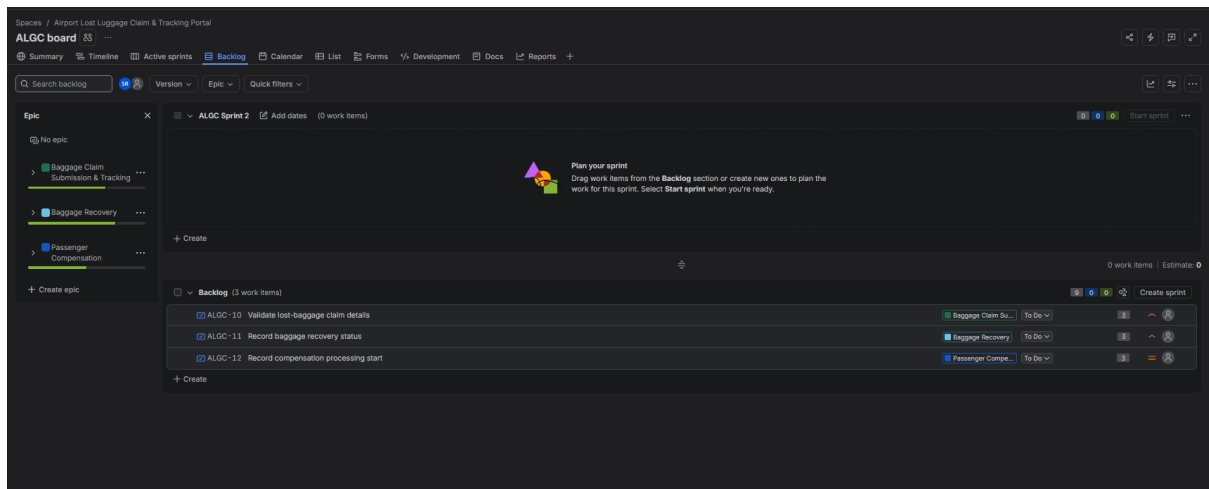

CancelComplete sprint

SPRINT 1 BURNDOWN CHART

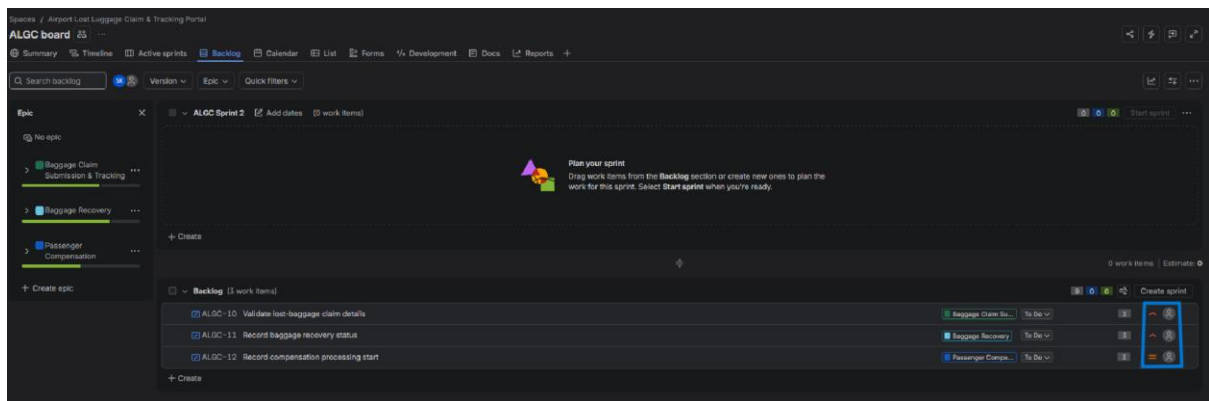

SPRINT 2:

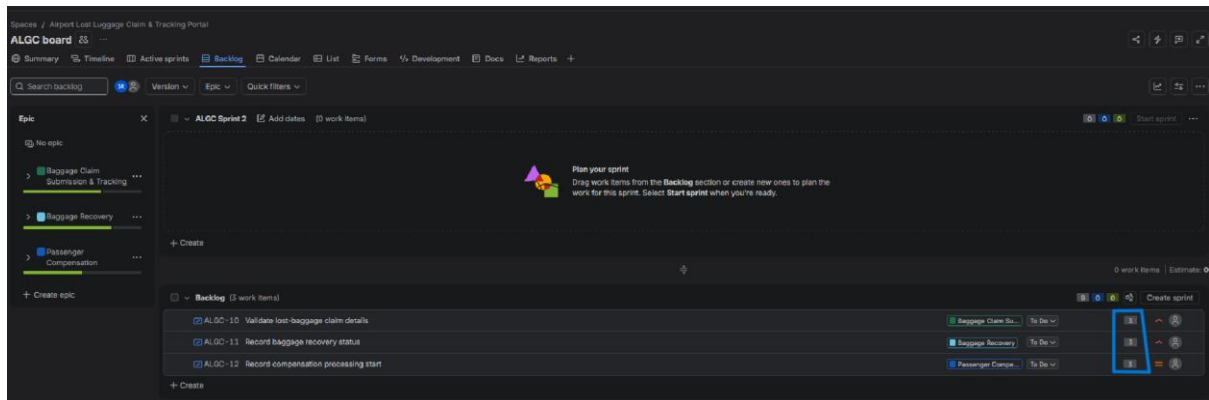

These are our derived estimates, not values explicitly specified in the Lab 1 requirements for running sprint 2

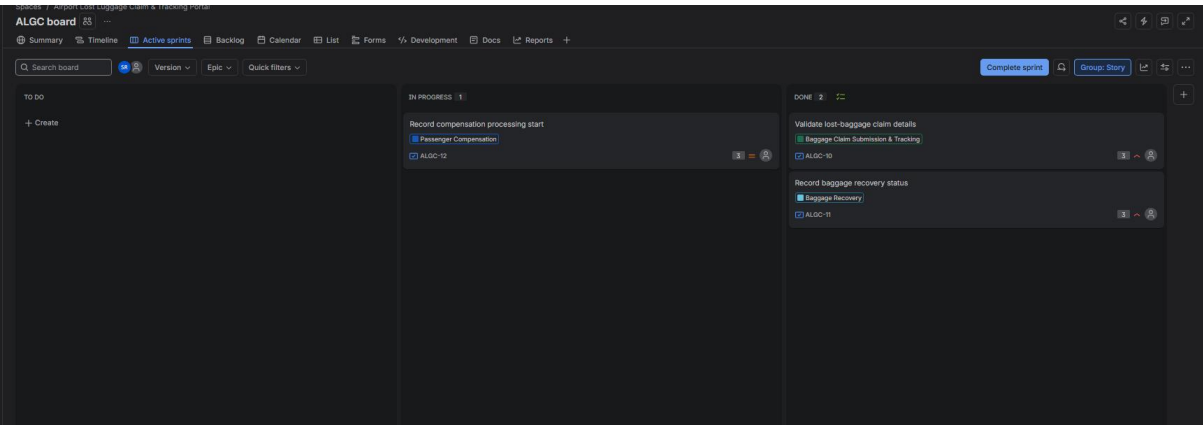

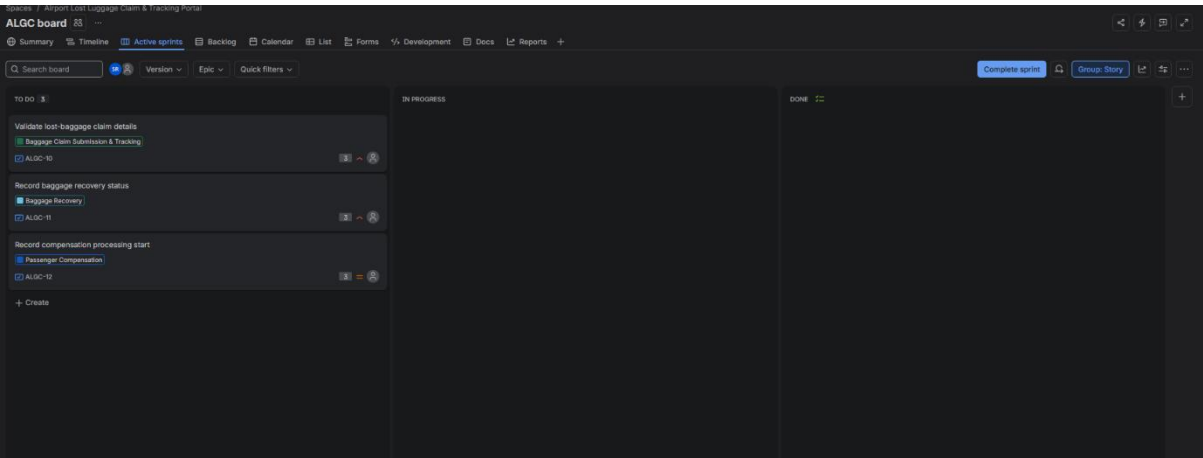

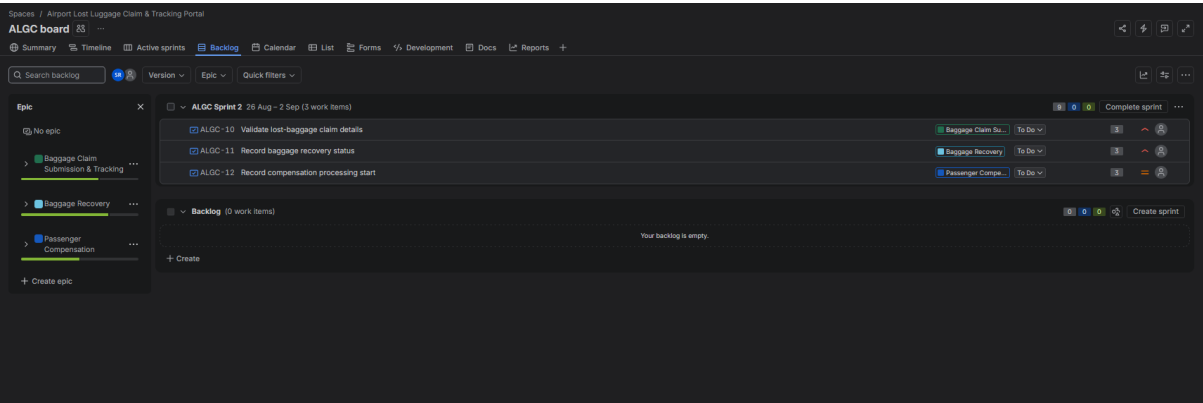

PRIORITY:

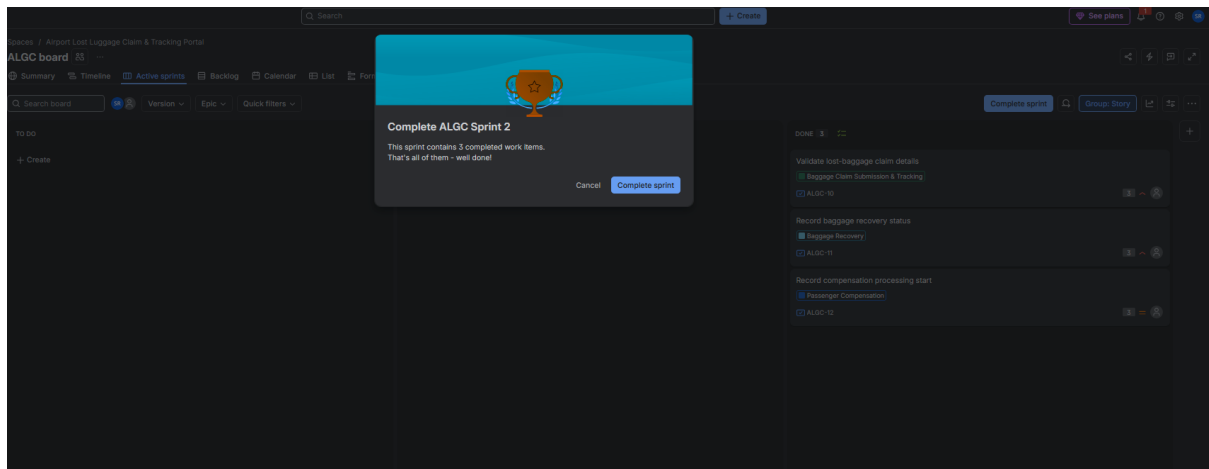

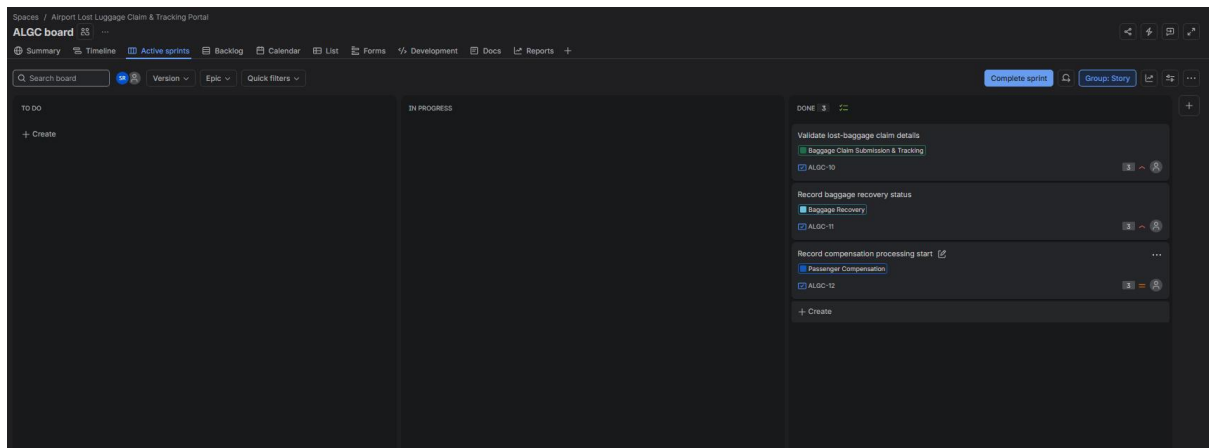

STORY POINTS:

SPRINT 2 SIMULATION

SPRINT 2 BURNOUT CHART

Reflection Questions:

1. Did your estimations reflect the actual effort?
2. Was your backlog well-prioritized?

3. How did your simulated sprint align with your plan?

4. What insights did the burndown chart give about your team's capacity?

1. Our estimations were reasonably consistent with the simulated effort. Larger and more complex stories received 5 points, while simpler stories received 3 points, following the Fibonacci-based estimation approach recommended in the lab.

2. The backlog was well-prioritized because the core claim, tracking, and recovery functions were given higher priority, while the compensation workflow was given medium priority in accordance with the requirements from Lab 1.

3. The simulated sprints generally aligned with the plan because the planned stories were progressed from To Do to In Progress and then Done. Sprint 1 and Sprint 2 both completed all the work that had been committed to them.

4. The burndown charts showed that the team completed its planned work quickly, with remaining story points falling to zero well before the planned sprint end. This suggests good simulated capacity, although the sharp decline also indicates that the simulation was completed faster than a typical real-world sprint.
